

# Programme Quality Handbook 2023/24

# HNC Manufacturing Maintenance Engineer

Welcome to HNC Manufacturing Maintenance Engineer delivered at Kings Road Campus by City College Plymouth.

With the ever growing need for multi-skilled personnel this HNC equips you with the knowledge to understand, design, develop and maintain electrical and mechanical systems within a manufacturing environment.

This programme has been designed to give the student a broad knowledge of manufacturing engineering, covering essential engineering topics such as mathematics, engineering science and principles, as well as essential design methodologies. Students will embark on design projects throughout the course where they will be able to use Computer Aided Design along with other industry based software to showcase their new found knowledge and skills. Throughout the course many of the module's assessments have been arranged to gain essential knowledge that will carry through to other modules. A wide range of assessments have been adopted to ensure student engagement including practical based assessments, reports, exams, portfolios and presentations.

This programme has been designed to equip you with the skills and knowledge base required to work in your chosen specialism or other graduate opportunities. It is also a platform from which you can undertake additional vocational and academic qualifications.

This Programme Quality handbook contains important information including:

- The approved programme specification
- Module records

Note: The information in this handbook should be read in conjunction with the current edition of:

- Your Programme Institution & University Student Handbook which contains student support based information on issues such as finance and studying at HE
- o available at: <u>http://hemoodle.cityplym.ac.uk/course/view.php?id=3305</u> Your Module, Teaching,
- Learning and Assessment Guide
- available at: <u>http://hemoodle.cityplym.ac.uk/course/view.php?id=3560</u> Plymouth University's Student Handbook
- o available at: <a href="https://www.plymouth.ac.uk/your-university/governance/student-handbook">https://www.plymouth.ac.uk/your-university/governance/student-handbook</a>

HNC Manufacturing Maintenance Engineer Final award title: HNC Manufacturing Maintenance Engineer Level X Intermediate award title(s): N/A Level X Intermediate award title(s): N/A UCAS code - N/A HECOS code N/A Awarding Institution: University of Plymouth Teaching institution(s): City College Plymouth Accrediting body(ies) N/A

### Distinctive Features of the Programme and the Student Experience

This HNC contributes to the important role manufacturing plays for the UK's, and more specifically Plymouth's, economies. Locally, manufacturing accounts for nearly 13 per cent of the total economy and a similar proportion of the labour market. Plymouth Manufacturing Group (PMG) members alone have a collective turnover of £1.6bn, which equates to 15.3% of the local economy (<u>www.mypmg.co.uk</u>, 2019).

The delivery of the HNC Manufacturing Maintenance Engineer encompasses today's manufacturing requirements and that of their project and lead staff. The course is in 6 parts, or modules, covering the key aspects of Electrical, Electronic and Mechanical Engineering such as engineering science and maths, electrical and electronic principles and design with CAD. The programme is therefore to equipped to provide the manufacturing maintenance engineers of today with the knowledge to understand the principles behind electrical and mechanical systems, design and analyses.

Classroom lecturing is supported by practical workshops using industry standard hardware and software development environments within the College's specialist facilities. This will take full advantage of the College's £13m investment in the state-of-the-art Regional Centre of Excellence for STEM (Science, Technology, Engineering and Mathematics).

A rich range of assessment is employed to immerse students within their learning, not only on the underlying academic principles but also how they apply in practical, industrial applications. Close links have been established with local industries which drives the development and continuous updating of this course. Combined with continued consideration of wider engineering sectors, this ensures that the attributes and skills exercised by students on this course remain relevant to employment in the manufacturing sector locally, nationally and globally.

Delivery is flexible, aiming to accommodate, as much as is feasible, part-time students who are in full-time employment by utilising a day release delivery model to ensure that the impact on employment is kept to a minimum.

### Relevant QAA Subject Benchmark Group(s)

As a level-4 HNC, this programme is informed by:

- The QAA Framework for Higher Education Qualifications (FHEQ) 2014
- The QAA Foundation Degree Characteristics Statement (FDCS) 2015
- The QAA Subject Benchmark Statement for Engineering 2015 and link to the UK Engineering Council's UK-SPEC UK Standard for Professional Engineering Competence

### Page 3 of 23 **Programme Structure**

The Programme of study comprises of 120 module credits at level 4.

Due to our strong links with employers in the city and high number of part-time learners who are already employed in industry our programme has been developed to provide for the varied roles across the city following on from and as a progression route for those students who undertake the level 3 Engineering Diploma (NDMD) at City College Plymouth. Therefore, this course is only offered as a part-time programme only.

### Page 4 of 23 Programme Aims

1. To develop knowledge and understanding of engineering principles related to manufacture

2. To develop analytical skills related to the solving of manufacturing problems 3. To enable the opportunity to apply technical and practical skills.

4. To prepare students to 'contribute towards design' via practical and project-based work.

5. To develop students' skills in 'accepting and exercising personal responsibility.' 6. To prepare students to use effective communication and interpersonal skills.

### **Programme Intended Learning Outcomes**

### Knowledge and understanding

On successful completion graduates should have developed knowledge and understanding of:

- 1) the scientific, mathematical and statistical principles underpinning application of current technologies, and their evolution, in -manufacturing.
- 2) relevant materials, equipment, tools, processes, products and practice to be employed for manufacture of engineering solutions.

### Cognitive and intellectual skills

On successful completion graduates should have developed the cognitive and intellectual skills to analyse and apply:

1) information sourced from academic and technical literature and other sources. 2) knowledge and understanding through projects in order to implement design solutions and contribute to their evaluation for electrical and mechanical manufacturing solutions.

### Key and transferable skills

On successful completion graduates should have developed the key and transferable skills to:

- 1) conduct and manage themselves to contribute through personal and team programmes of work with the ability to communicate appropriately within working environments.
- 2) engage with and effectively employ general IT applications and facilities.

### **Employment-related skills**

On successful completion graduates should have developed the employment related skills to:

1) analyse and solve problems of an engineering nature.

### **Practical skills**

On successful completion graduates should have developed the practical skills to: 1) work safely and competently within a workshop or laboratory environment. 2) Work with information that may be incomplete or uncertain to monitor, analyse and evaluate electrical and mechanical systems in practice.

### Page **5** of **23**

### Admissions Criteria, including APCL, APEL and Disability Service arrangements All applicants must have GCSE (or

equivalent) Maths and English at Grade C or above.

| Entry Requirements for HNC Engineering for Manufacture |   |  |  |  |  |  |  |
|--|---|--|--|--|--|--|--|
| A-level/AS-level                                       | Normal minimum entry requirements are 48 on new UCAS Tariff at A-level to include Grade D in Maths or Physics                       |  |  |  |  |  |  |
| BTEC National<br>Diploma/QCF Extended<br>Diploma       | Candidates are interviewed before an offer is made. But an equivalent of 48 UCAS points in an Engineering Subject                   |  |  |  |  |  |  |
| Access to Higher<br>Education at level 3               | Candidates are interviewed before an offer is made. Pass an Access to HE<br>Diploma in Science with an equivalent of 48 UCAS points |  |  |  |  |  |  |
| Welsh Baccalaureate                                    | Normal minimum entry requirements are an equivalent of 48 on new UCAS Tariff include Maths, Physics or Engineering                  |  |  |  |  |  |  |
| Scottish Qualifications<br>Authority                   | Normal minimum entry requirements are an equivalent of 48 on new UCAS Tariff include Maths, Physics or Engineering                  |  |  |  |  |  |  |
| Irish Leaving Certificate                              | Normal minimum entry requirements are an equivalent of 48 on new UCAS   |  |  |  |  |  |  |

|   | Tariff include Maths, Physics or Engineering   |
|---|--|
| International<br>Baccalaureate                    | Normal minimum entry requirements are an equivalent of 48 on new UCAS Tariff include Maths, Physics or Engineering   |
| Non-Standard<br>Qualifications with<br>experience | All non-standard applicants are interviewed by the tutor and screened centrally to ensure impartial oversight.   |
| Disability  | The College has a dedicated Learning Support team who support in<br>every aspect of the student journey, including recruitment and<br>admissions. Students who declare they have a disability may be<br>invited to meet the team to discuss support needs relevant to the<br>course and to determine any physical barriers that may be in place.<br>The College is committed to being an inclusive environment and will<br>work to ensure all reasonable adjustments are made. |

|--|--|---|
| An explanation of this map:<br>When planning or designing our curriculum<br>we make decisions about a wide range of<br>interacting elements. These are considered<br>together and not as a series of items.<br>Therefore, choices about aims which affect<br>methods of assessment or availability of<br>resources may support or preclude<br>methods of learning and practicalities of<br>time and venue may dictate the mode of<br>instruction. Also the views of different<br>stakeholders, including the industry<br>partners have a major impact. The students<br>are central, but their needs must fit with the<br>demands of the employers and the<br>requirements of higher education. The City<br>College Plymouth lecturers and the industry<br>sponsors must share a common<br>understanding of the curriculum pressures,<br>and this is discussed utilising employer<br>focus groups and forums. |  |   |

### Additional Guidance for Learning Outcomes:

To ensure that the module is pitched at the right level check your intended learning outcomes against the following nationally agreed standards

Framework for Higher Education Qualifications

Professional body minimum pass mark requirement: n/a

### MODULE AIMS:

To gain a solid foundation in algebra, trigonometry, functions and calculus in order to associate and recognise the importance of mathematics in the analysis of engineering problems To develop mathematical problem solving simultaneously with other science and engineering modules.

ASSESSED LEARNING OUTCOMES: (additional guidance below) At the end of a module the learner will be expected to be able to:

LO1. recognise the essential application of mathematical techniques to solve engineering problems

LO2. apply exact mathematical methods to analyse and solve problems of an engineering and scientific nature

LO3. use complex number theory in practical engineering applications

LO4. understand a variety of techniques of differential and integral calculus and their associated applications in engineering

OTHER MODULE STAFF: N/A

### Summary of Module Content Revision of Algebra and Arithmetic

Basic number and arithmetic operations, algebraic techniques including evaluation of formula, rearranging formula, solving simple equations, laws of logarithms, laws of indices, etc. These skills will be built upon throughout the delivery of each individual topic in this module.

### **Trigonometric functions and graphs**

Simple trigonometric functions of sine, cosine, tangent and hyperbolic functions of sinh<sup>-</sup>, cosh and tanh. The applications of these functions in engineering including vectors and waveform combination.

### **Complex numbers**

Addition, subtraction, multiplication and division of complex numbers in Polar and Cartesian form. The Argand diagram. The modulus and argument. Applications in engineering.

### **Differential Calculus**

Basic differentiation techniques of polynomial, trigonometric, exponential and logarithmic functions. Further techniques including the product, quotient and chain rules. Engineering applications to optimisation and higher order differentials.

### Integral calculus

Basic integration techniques of polynomial, trigonometric and exponential functions. Further techniques including integration by parts and substitution. The methodical applications of definite and indefinite integration with and without engineering scenarios including the interpretation of areas under a curve.

### SUBJECT ASSESSMENT PANEL: Technology

### MODULE AIMS:

To investigate the fundamental scientific principles which underpin the design and operation of engineering systems.

To give a mechanical and electrical overview which will provide the basis for further study in specialist areas of engineering.

### ASSESSED LEARNING OUTCOMES: (additional guidance below)

At the end of a module the learner will be expected to be able to:

LO1. Demonstrate an understanding of basic static and dynamic mechanical

systems LO2. Investigate energy transfer in thermal and fluid systems

**LO3.** Recognise and recall how DC theory relates to simple electrical machines

LO4. Show knowledge and awareness of the fundamental principles of single phase AC theory

### Summary of Module Content

Statics and Dynamics: SF and BM, bending stresses. Torsion . Uniform acceleration linear and angular. Newton's laws of motion, mass moment of inertia, kinetic energy, effects of friction. Vibrations, SHM, forcing and damping. Energy Transfer: Heat transfer: conduction, convection, radiation, thermal conductivity, forced convection, black and grey body radiation. insulated surfaces. Viscosity: boundary layer formation, laminar and turbulent flow, pressure loss in pipes. Energy losses: dynamic viscosity, power loss in bearings. pipe friction losses. Electrical Principles: Conductors, insulators, voltage and current. Ohm's law, Kirchhoff's law. Power: Electro-magnetic induction, transformers, Lenz's and Faraday's laws. Generator and motor principles. Single Phase AC theory: Non-resonant circuits: R-C-L circuits; Argand diagrams. Resonant circuits, L-C series and parallel, resonant frequency, Power factor correction, Complex waveforms: graphical analysis, odd and even-harmonics, phase shift, non-linear characteristics

### MODULE AIMS:

Investigation of how formal draughting forms a corner stone of the design process Practice of the skills necessary to produce and interpret drawings and computer models to British Standards

Experimentation in to the use of 3D visualisation as an engineering tool

Introduce Design techniques and carry out a work based design project.

### **ASSESSED LEARNING OUTCOMES:** (additional guidance below)

At the end of the module the learner will be expected to be able to:

LO1. Produce 2D detail and assembly drawings and 3D wireframe, surface and solid

models using an industry standard CAD package to British Standards.

LO2. Produce rendered and animated visualisations to present to employers

LO3. Formulate, implement, evaluate and present a work based design project LO4. Report

to employers on the sustainability and ecology in design and the product life cycle

### SHORT MODULE DESCRIPTOR:

This module provides learners with a practical understanding of a range of digital and analogue devices and circuits in common use within Electrical/Electronic Engineering Systems. Students will analyse the operational principles associated with a number of fundamental electronic building blocks and will consolidate their learning through the practical build, testing and presentation of real circuits.

### SUBJECT ASSESSMENT PANEL : Technology

### Professional body minimum pass mark requirement: n/a

### MODULE AIMS:

To give the learner a sound knowledge of the operational principles of a range of digital and analogue devices and circuits To develop the skills necessary to design construct and test common analogue and digital circuits.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
At the end of a module the learner will be expected to be able to:
LO1. Describe the operation and characteristics of arrange of analogue devices and circuits LO2. Describe the operation and use of a range of logic devices
LO3. Design and test, using computer simulation and/or practical build an analogue circuit to a given specification
LO4. Design and test, using computer simulation and/or practical build a digital circuit to a given specification

### **Summary of Module Content**

Devices – dc and small signal operation of diodes and transistors, DC power supplies – operation, design and test of linear and switched mode power supplies.

Operational amplifiers – ideal and practical op-amps, operation, design and test of common operational amplifier circuits, use of simulation software.

Digital electronic circuits – logic devices and elements, combinational logic design, sequential logic circuit design, use of simulation software.

|----------------------|---------------------|------------------|
|----------------------|---------------------|------------------|

### SHORT MODULE DESCRIPTOR:

This module covers the Electrical Principles which learners in many branches of Electrical and Electronic Engineering need to understand. It builds on the elements of basic circuit theory and provides the basis for further study in the more specialist areas of Electrical and Electronic Engineering.

| ELEMENTS OF ASSESSMENT  |     |            |     |          |  |
|-------------------------|-----|------------|-----|----------|--|
| WRITTEN EXAMINATI       | ON  | COURSEWORK |     | PRACTICE |  |
| E1 (Formally scheduled) | 60% | C1         | 40% | P1       |  |
| <b>E2</b> (OSCE)        |     | C2         |     | P3       |  |
| T1 (in-class test)      |     | A1         |     |          |  |

### SUBJECT ASSESSMENT PANEL : Technology

### Professional body minimum pass mark requirement: n/a

### MODULE AIMS:

The aim of this module is to develop the skills necessary to analyse circuits and waveforms, by gaining an understanding of the principles of circuit theory, the behaviour of passive and reactive components, two-port networks, complex waves and circuit transients.

### ASSESSED LEARNING OUTCOMES: (additional guidance below)

At the end of the module the learner will be expected to be able to:

**LO1.** Demonstrate an understanding of dc circuit theorems and be able to apply them to solve practical circuit problems. Understand the application of vectors and complex numbers to the solution of ac circuits. **LO2.** Investigate and develop analytical models of transformers and two-port networks. **LO3.** Demonstrate an understanding of the analysis and synthesis of complex waveforms. **LO4.** Develop an understanding of the analysis of circuit transients.

| DATE OF APPROVAL: June 2017       | FACULTY: Academic Partnerships |
|-----------------------------------|--------------------------------|
| DATE OF IMPLEMENTATION: Sept 2017 | PARTNER: City College Plymouth |
| DATE(S) OF APPROVED CHANGE:       | TERM: All Year                 |

### SECTION B: DETAILS OF TEACHING, LEARNING AND ASSESSMENT

*Items in this section must be considered annually and amended as appropriate, in conjunction with the Module Review Process.* 

ACADEMIC YEAR: 2023/24

NATIONAL COST CENTRE: 119

**OTHER MODULE STAFF: Andrew Reed** 

### Summary of Module Content

Circuit Theory-transformation theorems and equivalent circuit parameters, circuit theorems,

magnetically coupled circuits and series and parallel tuned circuits.

Two-port networks-network models applied to practical circuits, transformers, modelling of common two-port networks.

Complex waves-properties, analysis and synthesis of complex waves.

Laplace transforms-definition, use of transform tables, solution of first order systems for step and sinusoidal inputs, solution of second order systems to step inputs.

| SUMMARY OF TEACHING AND LEA | ARNING |                                    |
|-----------------------------|--------|------------------------------------|
| Scheduled Activities        | Hours  | Comments/Additional Information    |
| Lecture                     | 60     | 30 x 2 hour lectures               |
| Tutorial                    | 15     | Academic Support (Contact and VLE) |
| Independent Study           | 125    | Guided self-study                  |
| Total                       | 200    |                                    |

| Category     | Element | Component Name                                    | Component<br>weighting | <b>Comments</b><br>Include links to<br>learning<br>objectives |
|--------------|---------|---|------------------------|---|
| Written exam | E1      | End of Module Examination                         | 100%                   | LO1,LO2, LO4  |
| Coursework   | C1      | Assignment<br>Analysis of complex AC<br>wave form | 100%                   | LO3   |
