WELCOME AND INTRODUCTION

1. Welcome and Introduction to FdA Game Design and Production

Welcome to the Foundation Degree in Game Design and Production a holistic approach to game design and production that will guide you through the theory and application of design principles, whilst ensuring you have a higher understanding of the academic theory behind player motivation and psychology. In order to ensure you are “work ready” there is considerable focus on the development of practical skill sets in programming, art and level creation. The Foundation Degree in Game Design and Production culminates in the final year with a group to create a fully working game for release onto the market. As is becoming increasingly the case in the game development sector we are fully aware that without sufficient promotion your skill set may well go unnoticed and therefore the final module of this course of study is designed specifically with self- promotion in mind.

This programme has been designed to equip you with the skills and knowledge base required to work in your chosen specialism or other graduate opportunities. It is also a platform from which you can undertake additional vocational and academic qualifications.

This Programme Quality handbook contains important information including:

- The approved programme specification
- Module records

Note: the information in this handbook should be read in conjunction with the current edition of the College / University Student handbook available at <http://hemoodle.cityplym.ac.uk/course/view.php?id=3305> which contains student support based information on issues such as finance and studying at HE along with the University’s Student Handbook <https://www.plymouth.ac.uk/your-university/governance/student-handbook> and your Teaching, Learning and Assessment Handbook available on your programme virtual learning environment.

2. Programme Specification

This Programme Specification contains no information pertaining and / or referring to individual members of staff and therefore is appropriate to be employed as a public document.

PS1. Programme Details

| | |
|------------------------------------|---|
| Awarding Institution: | University of Plymouth |
| Teaching Institution: | City College Plymouth |
| Accrediting Body: | University of Plymouth. |
| Language of Study: | English |
| Mode of Study: | Full Time / Part Time. |
| Final Award: | Foundation Degree |
| Intermediate Award: | N/A |
| Programme Title: | Game Design and Production |
| UCAS Code: | I620 |
| JACS Code: | I620 |
| Benchmarks: | Informed by QAA Benchmark statement for Communication, media, film and cultural studies (2008) and QAA Benchmark statement for Computing (2007) QAA Foundation Degree Qualification Benchmark (2010) |
| Date of Programme Approval: | Wednesday 19 th March 2014 (Stage 2 Approval) |

PS2. Brief Description of the Programme

The following is a description of the programme that clarifies both its position within City College Plymouth and University of Plymouth's respective portfolios and provides material that may be directly used for promotion of the programme.

Our Game Design and Production programme will enable students to develop the creative, technical and employability skills essential for working in today's rapidly growing games industry. From the pre-production process of research, context and conceptualisation, to the game design process and final realisation of a fully working product. Students will embrace the multidisciplinary nature of working in the creative industries, through reflective individual practice and collaborative problem solving. Students will be critically aware of their product in the context of the games industry and its potential social and economic viability.

Inspired by the International Game Developers Association Curriculum Framework the programme will work to emulate the development and production process applied in the games industry whilst promoting the academic rigour essential to contextualisation and critical reflection.

Lecturers from specialist disciplines and those with industry relevant experience will contribute to the delivery of the programme using a variety of teaching methods and approaches to include; practical workshops, traditional lectures, student collaboration and promotion. Learning will be supported by summative and formative feedback as well as social media to provide support beyond the classroom and enabling both student and industry networking.

Work related learning will be implicit through student collaboration, subject networking and product promotion for example. The nature of the programme dictates that game technology will be necessary to methods of assessment and therefore true to the industry, however practical assessment will be combined with traditional modes of assessment (such as essays and reports) to ensure the promotion of high academic standards required to equip students for a potential year at University of Plymouth.

PS3. Details of Accreditation by a Professional/Statutory Body (if appropriate)

N/A though the programme has been designed in response to the IGDA (International Games Development Agency) Curriculum Framework (The Study of Games and Game Development) Version 2.3 beta February 25th 2003.

PS4. Exceptions to University of Plymouth Regulations

No exceptions to regulations.

PS5. Programme Aims

The Programme will deliver:

1. Historical, cultural and critical understanding of the games industry and its social significance, in order that students actively participate in shaping the evolution of this growing creative industry.
2. Creative disciplines that promote innovative responses to audience requirements in the context of the games industry and helps students identify areas of growth and significance for creative development.

3. Industry working practices in order to provide students with practical industry relevant skills that with peer collaboration will enable the design, development and production of a viable working product.
4. A framework to enable students to develop a social network of technical support for game design and production through internet forums, blogs and other social media. The development of students' online networking skills will be applied towards the promotion of the game product in the marketplace and will by default raise the students profile as potential employees in the games industry.
5. The tools to enable students to become independent learners in both technical and theoretical subjects and to pursue higher level knowledge for both academic critical understanding and the vocational requirements of the industry.
6. An industry relevant skill as identified by the International Game Developers Association IGDA and allow for progression to an honours degree programme at University of Plymouth.

PS6. Programme Intended Learning Outcomes (ILO)

By the end of this programme the student will be able to:

1. Evidence a range of technical skills through the application of the design development and production of an electronic game or games.
2. Apply academic understanding to critically analyse the social and cultural significance of the electronic games industry.
3. Implement a creative and innovative approach to game development via pre-production plans and to identify growing areas within the industry in both an appropriate academic format and conceivably through proactive involvement in that area of growth.
4. Nurture an entrepreneurial appetite for collaboration and enterprise, students will prepare production and promotional documentation and build links within the local game developer community.
5. Assess the effectiveness of his or her self-directed professional learning and practice through critical reflection in order to identify areas for development and further investigation.
6. Combine academic knowledge with technical skills in order to develop solutions for game development and production.

PS7. Distinctive Features

- The programme unites the technical skills necessary to the design and production of an electronic game with the academic application of game design theory in order to promote creative, structured and innovative solutions towards active production.

- Students will develop practical skills in game design and production as identified by the International Game Developers Association, encompassing: design, production, promotion and cultural significance.
- The programme will provide opportunity for students to integrate with the local game developer community and promote their skill set whilst nurturing an entrepreneurial attitude and partaking in a more diverse learning environment. The virtual nature of the game product will require students to develop a physical network (Meetings with Business and Marketing students and possibly previous Games students for feedback and advice) as well as develop a virtual social network of support, for example through fan sites or their own development forums which will in turn raise the profile of their product. Given that the games industry openly recruits via the internet such collaboration with business and marketing students as well as the global network will promote the skills of Game Design and Production (and potentially Business and Marketing students) students to potential employees.
- The programme will embrace the cultural and social significance of electronic games in order to better understand and respond to the requirements of the audience and the market.
- This is an innovative programme that aims to embrace the language of electronic games as an evolving medium of increasing social and cultural significance and to directly impact on the future of this evolution.
- The programme provides an opportunity to learn from lecturers from different disciplines; for example lecturers from design backgrounds and software engineering specialists, as well as to learn from industry professionals (through guest speakers and virtual conferences) in order to forge links with those active in the growing Indie developer sector.
- The programme will provide a critical approach to subject study that integrates academic theory with the voices of opinion leaders active in social and electronic media.
- Teaching will be innovative mixing traditional academic lectures with debriefing sessions as implementing in the “scrum” nature of the industry.
- Assessment will be both formative and summative whilst students will be actively encouraged to seek feedback through the wider audience of social media and subject specific forums.
- Partnership with University of Plymouth provides access to a broad range of additional learning resources and academic and professional integration and validation.

PS8. Student Numbers

The following provides information that should act as a guide to assure the quality of the student experience, progression opportunities, and staff and resource planning:

Approximate minimum student numbers per stage = **12**

Target student numbers per stage = **15**

Approximate maximum student numbers per stage = **20**

PS9. Progression Route(s)

Students who successfully pass the Foundation Degree may progress to one the following:

BA/ BSc (Hons) Digital Art and Technology (Game Design Pathway) (Year 3) Level 6.

PS10. Admissions Criteria

| Qualification(s) Required for Entry to this Programme: | Details: |
|--|---|
| Level 2: | |
| - Key Skills requirement / Higher Level Diploma: | Functional skills level 2 Maths/ English where no GCSEs grade C or above along with an evident interest in games design and production (subject to success at interview where required). |
| and/or | |
| - GCSEs required at Grade C or above: | 5 GCSE's with Maths and English at grade C or equivalent qualification. |
| Level 3: at least one of the following: | |
| - A Levels required to meet AS/A2/UCAS Points Tariff: | 48 UCAS points |
| - Advanced Level Diploma: | In relevant subject area e.g. IT or Multimedia. |
| - BTEC National Certificate/Diploma: | Pass in relevant subject at the equivalent of 48 UCAS points, to include Extended Diplomas Pass in relevant subject at the equivalent of 48 UCAS points, to include Extended Diplomas. A evident interest in games design and production is essential along with a mature attitude to study requirements (subject to success at interview where required) |
| - HNC/D: | Pass, to include related subject areas (IT Multi-Media Games) an evident interest in games design and production is essential (subject to success at interview where required) |
| - VDA: AGNVQ, AVCE, AVS: | N/A |
| - Access to HE or Year 0 provision: | Pass, to include related subject (IT, Multi-Media, Games) |
| - International Baccalaureate: | 26 points |
| - Irish / Scottish Highers / Advanced Highers: | 48 UCAS points |

| | |
|---|---|
| Work Experience: | Any related work experience will be beneficial and considered towards entrance |
| Other non-standard awards or experiences: | Considered on individual merit. |
| APEL / APCL possibilities: | All accreditation of certificated learning and accreditation of prior experiential learning arrangements will be dealt with on an individual basis in line with City College Plymouth and University of Plymouth regulations. |
| Interview / Portfolio requirements: | Interviews may be required by the admissions tutor. |
| Independent Safeguarding Agency (ISA) / Criminal Record Bureau (CRB) clearance required: | No |

PS11. Academic Standards and Quality Enhancement

The programme will follow University of Plymouth's Current annual monitoring process for partnership programmes to complete evaluation of and planning for maintaining and improving quality and standards.

Elements of this process include engaging with stakeholders. For this definitive document it is important to define:

Subject External Examiner(s): modules parented by this programme will be covered by this programme's external examiner, apart from SDFD102 which is covered by the External Examiner for FdSc Software Development

Additional stakeholders specific to this programme: Students, Graduates, University of Plymouth, Employers.

Programme Structure for the Foundation Degree in Games Design and Production (Full Time)

2018/19

Course Code UF5078

| Year 1 | | | | Year 2 | | | |
|-------------|------------------------------------|----------------|-----------------|-------------|--------------------------|----------------|-----------------|

Exposition and Mapping of Learning Outcomes, Teaching & Learning and Assessment

Developing graduate attributes and skills, at any level of HE, is dependent on the clarity of strategies and methods for identifying the attributes and skills relevant to the programme and the where and how these are operationalized. The interrelated factors of Teaching, Learning and Assessment and how these are inclusive in nature are fundamentally significant to these strategies and methods, as are where and how these are specifically distributed within the programme.

Ordered by graduate attributes and skills, the following table provides a map of the above plus an exposition to describe and explain the ideas and strategy of each. Therefore, subsequent to the initial completion for approval, maintenance of this table as and when programme structure changes occur is also important:

| Level:4. | Level 4 | | | | |
|---|--|------------------|--|--|---|
| Definitions of Graduate Attributes and Skills Relevant to this Programme | Teaching and Learning Strategy / Methods | Prog Aims | Prog intended Learning Outcomes | Range of Assessments | Related Core Modules |

At this stage in the programme students will be expected to bring together these practical skills, implement sound and animation, and create a fully working product viable for launching into the games industry.</p> | | | | | |

Work Based/Related Learning

WBL is an essential element of Foundation Degrees and therefore needs to be detailed here. However, there should be an employability focus for all HE programmes, through at least Work Related Learning. Therefore, the following section is applicable to all programmes:

| Level:4 | | | | | |
|--|--|-----------|------------------|---|---|
| WBL/WRL Activity: | Logistics | Prog Aim | Prog Intended LO | Range of Assessments | Related <u>Core</u> Module(s) |
| Research | On-going throughout the programme and across most units, using a variety of sources (primary and secondary) | 2,5 | 2 | Essay, Electronic Multimedia Portfolio, Presentations and Seminars. | CITY1048 SDFD102 CITY1049 CITY1114 CITY1113 CITY1051 |
| Identify and propose game design concepts through Game Planning | Investigation of industry techniques :Sketches and Designs, Game Treatment, Game Design Documentation, Presentations. Q & A sessions, Group Work | 1,3,6 | 3,4, | Produce a game treatment and game design document including digital sketches and diagrams | |
| Game development: Creating game assets (Graphics. 3D models, 3D animations and Sounds for computer | Teacher demos, Guest speakers, Accessing web based tutorials ,Electronic resources (hardware and software) available at CityCollege Plymouth. Experiential | 1,3,4,5,6 | 1,3,4, | Produce a digital scrapbook / electronic portfolio of the asset creation process. | |

| | | | | | |
|---|---|------|------|--|--|
| games) Creating game narratives. | and Self-directed learning, Peer support and collaboration. | | | | |
| Reflection | On-going | 1,6, | 2,5, | Present a critical reflection on application of the production processes and methods in light of working practices in the creative media industry. | |
| WBL or WRL is essential to the vision of this programme, and will be embedded across all units. Game development and design is both academic and practical: students will need to develop the academic understanding of theories whilst mastering the complexities of different software and combine this knowledge in order to develop a viable working product in accordance with methods used in industry. | | | | | |

| Level:5 | | | | | |
|--|--|-----------------|-------------------------|--|--|
| WBL/WRL Activity: | Logistics | Prog Aim | Prog Intended LO | Range of Assessments | Related <u>Core</u> Module(s) |
| Research | On-going throughout the programme, using a variety of sources (primary and secondary) | 5,6 | 1 | Essay, portfolio of investigation, video reviews and recommendations, presentations, seminars | CITY2125 CITY2035 CITY2043 CITY2126 CITY2045 CITY2127 |
| Recommend (Game Engine). Propose (systems of play). | Teacher demos and lecturers Guest speakers, Accessing web based tutorials, electronic resources (hardware and software) available at CityCollege Plymouth. | 1,2,3,5,6 | 4,6 | Essay, portfolio of investigation, video written reviews and recommendations, game design documentation and plans, presentations, seminars | |

| | | | | | |
|---|--|------------|--------|--|--|
| Implement (production and enterprise) | Teacher demos, Guest speakers, Accessing web based tutorials, electronic resources (hardware and software) available at CityCollege Plymouth. Experiential and Self-directed learning, Peer support and collaboration. | 1,2,3,5,6 | 1,3,6 | Produce a digital scrapbook / electronic portfolio of the production process. Present final product for peer feedback and teacher assessment. | |
| Enterprise (business knowledge, career networking, industry commerce and promotion) | Lecturers, Guest Speakers, Student collaboration, Interviews and Surveys, Social Media, Industry related news and media, Creative techniques, Opportunities within the games industry (Steam Greenlight / Kickstarter) | 1,2,3,4,6. | 6 | Create a product identity. Evidence the development of business relationships (across faculties) Evidence the development of social media relations. Propose a product launch procedure / timetable. | |
| Reflection | On-going throughout units. | 1,2,3,6 | 2,3,5, | Essay or presentation assessing the social and cultural implications of venture into the games industry. Assessing success of own production. Critically reflecting on methods for releasing and promoting own game. | |

WBL or WRL is essential to the vision of this programme, and will be embedded across all units accumulating in collaborative work across two academies whereby games Students work with Business and Marketing students. Students will need to integrate their knowledge of game theory with their practical game development skills in order to create a viable working product and launch their game into the market place. This programme aims to take the student through the full process of developing and producing a game: from clarifying and sharing initial ideas, though the development process and finally to the launch and promotion of the game. It is envisaged that students will work collaboratively across faculties in order to promote the game into the market place.

3. Module Records

SECTION A: DEFINITIVE MODULE RECORD. *Proposed changes must be submitted via Faculty Quality Procedures for approval and issue of new module code.*

| | | |
|-----------------------------|----------------------------|---------------------------|
| PRE-REQUISITES: None | CO-REQUISITES: None | COMPENSATABLE: Yes |
|-----------------------------|----------------------------|---------------------------|

SHORT MODULE DESCRIPTOR:

This module requires students to understand the driving components of electronic game play in terms of player engagement and motivation. Students will research and identify audience receptions to historically significant game developments that have standardised game play conventions. Students will apply the rules of conceptual game design to their own proposal and assess the effectiveness of their proposals in line with industry leaders.

ELEMENTS OF ASSESSMENT

| | |
|----------------------|------|
| COURSEWORK | |
| C 1 | 100% |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

MODULE AIMS:

To develop students understanding of theoretical approaches to Game Design in order to inform their own game design documentation and proposals.

1. Deconstruct and evaluate the implementation of components of play in academically acclaimed and cult games.
2. Analyse the effects of game play developments through investigation into the reception of recognised innovative electronic games.
3. Drawing on critical analysis and research to recommend own conceptual game design and apply to relevant documentation.
4. Identify the validity of own conceptual game design in relation to historical developments and assessment.

ASSESSED LEARNING OUTCOMES

At the end of the module the learner will be expected to be able to:

- LO1 Evidence critical understanding of the components of game play
- LO2 Present research on the reception of electronic games
- LO3 Produce a conceptual game design document
- LO4 Critically reflect and assess the validity of own conceptual game design.

| E1 (formally scheduled) | 40% | C1 | 60% |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Software Development

Professional body minimum pass mark requirement: N/A

MODULE AIMS:
 The aims of this module are to enable the student to:

1. Understand and use the basic concepts of algorithms and data types
2. Design and develop code using structured programming methods
3. Produce appropriate documentation for a given program application
4. Create and apply appropriate test schedules

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Produce fully working programs from specifications.
 LO2 Apply and use documentation in the development of programs.
 LO3 Fully debug and test programs using recognised techniques.
 LO4 Understand and fully explain designed algorithms.

SHORT MODULE DESCRIPTOR: This unit will develop a student’s understanding of User Interfacing and how it can be successfully implemented in their own game designs. With a focus on graphical interfaces, students will also look at usability and feedback and learn how to asses and evaluate their own designs and implementations.

ELEMENTS OF ASSESSMENT

| COURSEWORK | | PRACTICE | |
|------------|------|-----------|------|
| C1 | 40 % | P1 | 60 % |

SUBJECT ASSESSMENT PANEL Group to which module should be linked:

Professional body minimum pass mark requirement: N/A

MODULE AIMS:
 This module will develop a student’s understanding of HCI and how it can be successfully implemented in their game designs. With a focus on graphical interfaces, students will also look at usability and learn how to asses and evaluate their own designs and implementations and understand the history and theory of human computer interfacing.

- Plan methods of interfacing for control and feedback in electronic games.
- Prototype a game interface using appropriate techniques
- Assess and reflect on the effectiveness of own HCI application

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Evidence critical awareness of the history and underlying concepts of Human Computer Interaction.
 LO2 Analyse and evaluate the use of Human Computer Interaction in computer and video gaming systems.
 LO3 Apply appropriate theory of Human Computer Interaction to the design and development of gaming systems.
 LO4 Assess usability and application of own User Interface Design

SHORT MODULE DESCRIPTOR:
 This module aims to develop the students' ability to understand the importance of artistic representation in the game environment. Students will learn how to convey their game visuals through digitally drawn concept art, how to use graphics packages to create 2D game art and how to use 3D modelling techniques to create low poly game components.

| | |
|-------------------|-------|
| COURSEWORK | |
| C1 | 100 % |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

- MODULE AIMS:**
- To assess the impact of artistic representation on player responses to the game world and understanding of contextual narrative.
 - To develop technical skills required for the production of digital landscapes, characters and game look.
 - To use graphics tablets and relevant software to create 2D Graphics backdrops, characters and obstacles in accordance with chosen house style.
 - To use 3D modelling software and apply techniques of modelling, topology, unwrapping and texturing in order to create low poly models.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Critique the relationship between player immersion and artistic representation of the game environment.
 LO2 Produce concept art that clearly conveys proposed game graphics
 LO3 Produce 2D graphics for computer games (interface or in game for example platformer)
 LO4 Produce low poly 3D models as in game components.

Professional body minimum pass mark requirement: N/A.

MODULE AIMS:
This unit introduces the concept of a game engine and will give the students an opportunity to examine and contrast the architectures of a number of popular engines. In particular it will look at 3D engines, such as UDK and Unity, and assess their architecture and features, through the implementation of a small game. Other 3D and 2D engines will also be examined as appropriate.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
At the end of the module the learner will be expected to be able to:
LO1 Critique the history and underlying concepts of Game Engines
LO2 Assess the function and components of a game engine
LO3 Analyse and evaluate the different 3D Games engines
LO4 Develop games, and game mods using 2D and 3D game engines

SHORT MODULE DESCRIPTOR:
 This module aims to develop an understanding of the nature of gaming and its role in society, to enable students to decode the semiotics and vocabulary of electronic games in order to propose their own system of play.

ELEMENTS OF ASSESSMENT

| WRITTEN EXAMINATION | | COURSEWORK | |
|--------------------------------|------|------------|------|
| E1 (formally scheduled) | 50 % | C1 | 50 % |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

MODULE AIMS:
 This module aims to develop an understanding of the nature of gaming and its role in society, to enable students to decode the semiotics and vocabulary of electronic games in order to propose their own system of play.

- To investigate theories of ludology and its wider role in cultural society.
- To investigate methods for implementing semiotic structures and their psychological impact on the game experience.
- To research the evolution and cultural significance of game vocabulary.
- To investigate techniques for implementing ludic play and semiotics relevant to modern cultural requirements.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Evidence critical understanding of the ludic structure of game and its role in society.
 LO2 Analyse the semiotics of electronic games.
 LO3 Research the evolution and cultural significance of game vocabulary.
 LO4 Propose systems of play in response to audience requirements.

|-----------------------------|----------------------------|---------------------------|

SHORT MODULE DESCRIPTOR:

Students will review a variety of platform types, and their development over the last 40-50 years, investigating both hardware and software architectures, examining the requirements that games software and hardware have. Students will learn to install and configure various platforms, and understand their construction and architecture, thus being able to troubleshoot problems and make recommendation for solutions.

ELEMENTS OF ASSESSMENT

| | |
|----------------------|-------------|
| COURSEWORK | |
| C 1 | 100% |

SUBJECT ASSESSMENT PANEL Group to which module should be linked:Game Design and Production

Professional body minimum pass mark requirement:N/A

MODULE AIMS:

The aim of this unit is to develop a student's understanding of the hardware and software used to create a computer games platform. It will review a variety of platform types, and look at their development over the last 40-50 years. It will look at both hardware and software architectures, examining the special requirements that games software and hardware have.

ASSESSED LEARNING OUTCOMES: (additional guidance below)

At the end of the module the learner will be expected to be able to:

LO1 Demonstrate critical understanding of the history and underlying concepts of Game Platforms

LO2 Evaluate and select appropriate hardware for gaming applications

LO3 Evaluate and select appropriate software for gaming applications

LO4 Install, configure, test and troubleshoot game platforms

| | | |
|-----------------------------|----------------------------|---------------------------|
| PRE-REQUISITES: None | CO-REQUISITES: None | COMPENSATABLE: Yes |
|-----------------------------|----------------------------|---------------------------|

SHORT MODULE DESCRIPTOR:
 This module aims to develop a critical understanding of the role of sound and animation in the psychology of video games and immersion of play. Students will learn techniques for creating immersive sounds and music for their video games. Students will learn the principles of animation and rigging of 3D objects for inclusion in video games.

ELEMENTS OF ASSESSMENT

| | | | |
|-----------|------|------------|------|
| Practical | | COURSEWORK | |
| P1 | 20 % | C1 | 80 % |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

MODULE AIMS:
 This Module aims to develop an understanding of the commercial nature of games and to provide learners with the knowledge of techniques used to drive and deliver hard and virtual products in the gaming society.

- To assess the immersive and psychological impact of sounds in video games.
- To understand rules of movement and physics and their application in animation.
- To develop technical skills in the use of industry standard sound engineering / creation software.
- Use 3D software to develop rigging and animating skills.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Propose immersive sounds and methods of creation.
 LO2 Plan and propose a system of movement for animated game components.
 LO3 Create sounds for a video game.
 LO4 Create animations for a video game.

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

MODULE AIMS:

- Identify the requirements and skills sets necessary to meet a project brief.
- Investigate and understand methods of working with others in order to identify individual strengths.
- Understand the requirements for producing a professional project plan.
- Evaluate the necessity of maintain development documentation.
- Develop professional time management skills and collaborative negotiation skills in order to drive a project forward and meet deadlines.

ASSESSED LEARNING OUTCOMES: (additional guidance below)

At the end of the module the learner will be expected to be able to:
 LO1 To select and organise a team in order to respond to a brief.
 LO2 To present a project plan.
 LO3 To maintain related development documentation.
 LO4 To deliver the project outcomes.

SHORT MODULE DESCRIPTOR:
 To enable learners to understand the nature of the game industry, in order to identify areas for commercial development. To promote virtual networking, social media and promotion techniques in order to construct their own social networks and structures for the promotion and marketing of own game.

| | |
|-------------------|------|
| COURSEWORK | |
| C1 | 100% |

SUBJECT ASSESSMENT PANEL Group to which module should be linked: Game Design and Production

Professional body minimum pass mark requirement: N/A

- MODULE AIMS:**
- To investigate industry methods for identifying areas of commercial development and potential growth
 - To forge networks and relationships towards promotion of own game.
 - To analyse successful industry methods of promoting and marketing in order to develop own marketing stagey.
 - To analyse the effectiveness of self- directed media enterprise.

ASSESSED LEARNING OUTCOMES: (additional guidance below)
 At the end of the module the learner will be expected to be able to:
 LO1 Critically assess industry methods for identifying areas for commercial development.
 LO2 Evidence ability to forge networks and relationships in order to promote own game.
 LO3 Implement a method for promotion and media relations for own game.
 LO4 Analyse the effectiveness of self-directed media enterprise.
